Batch: 2028

Degree: B.E - CSE

## NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 2\_COD\_Question 4

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

### Input Format

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

#### **Output Format**

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

```
Sample Test Case
   Input: 5
   10 20 30 40 50
Output: 10 20 30 40 50
   Answer
   // You are using GCC
   #include <stdio.h>
   #include <stdlib.h>
   struct Node {
     int studentID;
     struct Node* prev;
     struct Node* next;
   struct Node* head = NULL
   void insertEnd(int studentID) {
     struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
     newNode->studentID = studentID;
     newNode->next = NULL;
     newNode->prev = NULL;
     if (head == NULL) {
        head = newNode:
     } else {
       struct Node* temp = head;
       while (temp->next != NULL)
          temp = temp->next;
```

```
240701180
                                                   240/01/180
       temp->next = newNode;
        newNode->prev = temp;
    void displayList() {
      struct Node* temp = head;
      while (temp != NULL) {
         printf("%d ", temp->studentID);
        temp = temp->next;
      }
    }
    int main() {
    oint N;
      scanf("%d", &N);
      int studentID;
      for (int i = 0; i < N; i++) {
         scanf("%d", &studentID);
         insertEnd(studentID);
      }
      displayList();
      return 0;
Status : Correct
                                                                     Marks : 10/10
