REC\_DS using C\_Week 7\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

## Input Format

The first line contains two integers, n and table\_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

#### **Output Format**

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

### Sample Test Case

```
Input: 5 10
21 31 41 51 61
3
31 60 51
Output: Value 31: Found
Value 60: Not Found
Value 51: Found
Answer
#include <stdio.h>
#define MAX 100
// You are using GCC
void initializeTable(int table[], int size) {
  for(int i=0;i<size;i++)</pre>
  {
    table[i]=-1;
}
int linearProbe(int table[], int size, int num) {
 int index=num%size;
  int i=0;
```

```
while(table[index+i]%size!=-1 && i<size)
        j++;
      return (index+i)%size;
   void insertIntoHashTable(int table[], int size, int arr[], int n) {
      for(int i=0;i<n;i++)
      {
        int index=arr[i]%size;
        if(table[index]==-1)
       table[index]=arr[i];
        else
           index=linearProbe(table,size,arr[i]);
           table[index]=arr[i];
   }
   int searchInHashTable(int table[], int size, int num) {
      int index=num%size;
      int i=0;
      while(i<size)
        int cur=(index+i)%size;
        if(table[cur]==-1)
           return 0;
        if(table[cur]==num)
           return 1;
        j++;
      return 0;
int main() {
```

```

                                                      240701180
scanf("%d %d", &n, &table_size);
      int arr[MAX], table[MAX];
      for (int i = 0; i < n; i++)
         scanf("%d", &arr[i]);
      initializeTable(table, table_size);
      insertIntoHashTable(table, table_size, arr, n);
      int q, x;
      scanf("%d", &q);
      for (int i = 0; i < q; i++) {
       scanf("%d", &x);
        if (searchInHashTable(table, table_size, x))
           printf("Value %d: Found\n", x);
         else
           printf("Value %d: Not Found\n", x);
      }
      return 0;
    }
                                                                           Marks: 10/10
    Status: Correct
